1. Signal output is measured in air at 25 ° C, sea level.

2. Full Scale accuacy is calculated with constant pressure, temperature and proper calibration (80% O2 value on full scale range). Drastic temperature change can result in a maximum error of ± 10%.

3. Expected life is calculated when O2 < 20.9% @ 25 ° C, sea level.

4. Southland Sensing Ltd. warrants the sensors for the period noted above to be free from defects in materials and workmanship. Southland Sensing Ltd. will not be held liable for sensors damaged due to customer neglect.
